- Customizable
- Robust hardware

Teleprompter with advanced features and multilingual font support

Samvad is a windows based, one of its kind teleprompting solution which innovatively leverages the flexibility of modern software technology to produce a reliable and efficient solution. It obsoletes the need for hardware based equipments, that are costly to purchase and difficult to maintain. Samvad packages software with traditional lightweight yet robust aluminum prompting hardware, and various specialized accessories.

A software based solution allows for easier upgrades, web-based support and consistent performance.

Multilingual Support

Prompting in Indian Languages and support for Unicode fonts has been a key design element and the system thus, exhibits unparalleled flexibility in mixing multiple fonts and languages, free use of color, size and control over stories and run orders.

It is easy to import .rtf and .doc files into the run orders.

Easy Integration

Samvad integrates easily with various control systems through MOS protocol and other defined standards. It updates real-time and once integrated with a partner system, its operations can be completely controlled by various NCS like AP's ENPS, thereby reducing the cost of operations and probability of error and bringing harmony to the production process.

Models and Options

All models come with robust hardware. Future up-grade of software as per need.

Samvad 3.00E

Reliable

Being software based, there is no environmental constraint for SAMVAD to operate as long as the hardware processor it runs on can operate. It has no specialized electronic peripherals that can rust, wear off or deteriorate with time and use. Once installed, Samvad software is as reliable as the PC you have installed it on, which means, your safety remains in your hands. All of the equipment used, except for the software, is non-proprietary and easily available in the market, allowing the customer to keep backups ready for an emergency. Even the software can be transferred from one system to another in no time by plugging out the USB from one system and inserting into the other.

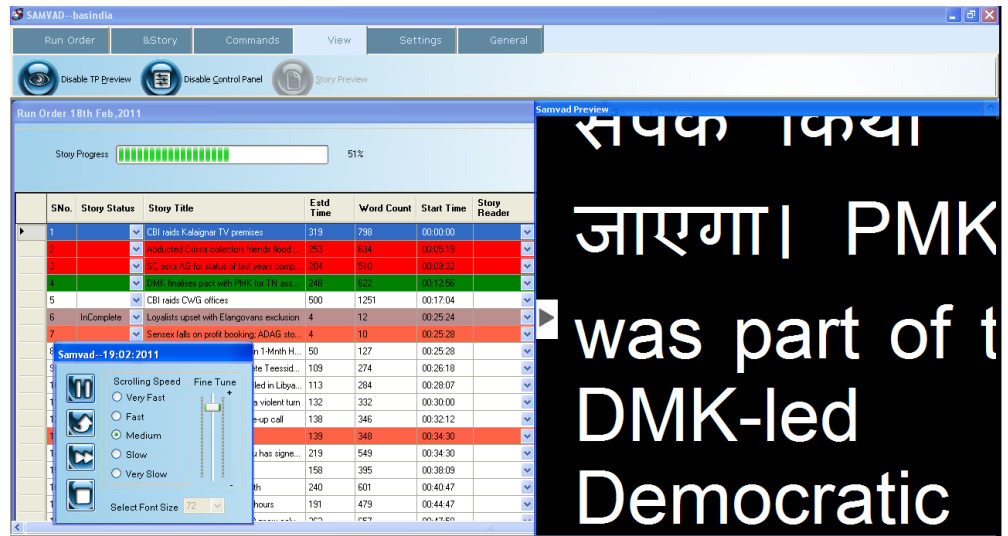

Intuitive User Interface

Anyone who has even brief experience of working on windows programs can easily operate Samvad. It comes with an intuitive user interface and can be learnt in no time. Installation is fast and easy. Operations are fault tolerant, and have been mapped with warnings to avoid unintended mistakes.

Fast Customer support

Not only has Samvad been tested for reliability and has proven to be a highly dependable product, but it also ranks high in serviceability. Being software based, upgrades are easy to add, and installation or user introduced problems can be easily fixed through web.

Hardware comes with a warranty against manufacturing defect and is robust enough to stand wear and tear for a long life.

USB controllers empower anchor with maximum control.
